Abstract	3

Chapter 1. General introduction

1.1. Current status of the substorm study	
1.1.1 Auroral substorm and associated magnetospheric process	
(a) Development of the global auroral imager	5
(b) Classical morphology	7
(c) Diffuse aurora, onset arc, and onset location	9
(d) Premidnight preference of the onset region	11
(e) Double oval configuration during the recovery phase	12
(f) North-south structured aurora	13
(g) Growth phase	13
(h) Precursor phenomena prior to the onset	28
(i) Onset signatures	32
(j) Evolution after the onset	40
(k) A typical example of the global auroral substorm evolution	45
1.1.2 A summary of the still un-resolved problems	48
1.1.3 Existing substorm models	48
1.2. Purpose and contents of this study	55

Chapter 2. Overview of the auroral substorm observation in 1989

2.1. Observations by the UV imager aboard the AKEBONO satellite in 1989	
2.1.1 Instrumentation	57
2.1.2 Auroral substorm evolution observed by the ATV-UV in 1989	58
2.2. Observations at Syowa and Asuka stations in 1989	
2.2.1 Instrumentation	61
2.2.2 Auroral substorm evolution observed at Syowa and Asuka stations in 1989	62

Chapter 3. Detailed study of the event on June 6-7, 1989

3.1. Growth phase evolution of nightside auroral activities and ionospheric convection toward expansion phase onset

Abstract.	67
1. Introduction	67
2. Observations	
2.1. Overview	70
2.2. Instrumentation	72
2.3. Growth phase features	
(1) Geosynchronous observation	74
(2) Ground-based magnetic observation	75
(3) Onset timing	75
(4) Auroral observation at Syowa and Asuka stations	78
(5) Plasma flow observation by Halley HF-radar	81
(6) Spatial and temporal relationship between observations	
(6.1) Two-dimensional evolution	83
(6.2) Comparison with satellite observations	85
3. Discussions	
3.1. Growth phase evolution in the ionosphere	90
3.2. FEM arc	94
3.3. NPSBL aurora	95
3.4. Growth phase evolution in the magnetosphere	97
4. Summary and Conclusions	99

3.2. Stepwise auroral bulge evolution during expansion phase

Abstract	101
1. Introduction	101
2. Observations	
2.1. Solar wind and geomagnetic conditions	103
2.2. Instrumentation	104
2.3. Overview of global auroral evolution	105
2.4. Detailed evolution	
(1) Timing between the onset phenomena	107
(2) Evolution during the Stage-1 and Stage-2	109
(3) Evolution during the Stage-3	112
(4) Observations at Asuka and Syowa stations	114
(5) Observation at geosynchronous orbit	117
3. Observation summary and Discussions	
3.1. Observation summary	119
3.2. Comparison with previous observations	121
3.3. Evolution in the magnetosphere	123
3.4. Comparison with previous models	128
3.5. Generality of this substorm	129
4. Summary and Conclusions	131

Chapter 4. Stepwise auroral substorm evolution observed by the meridian scanning photometers at Syowa and Asuka stations in 1989

4.1. Purpose of this Chapter	133
4.2. Features of the auroral substorm evolution in the event on June 6-7, 1989	133
4.3. Event selection and analysis procedure	135
4.4. Selected examples	141
4.5. Statistical results	145
4.6. Summary and conclusion of this Chapter	146

Chapter 5. Summary and Conclusions of this study 147
